Poisoning Coding Tip

A definite diagnosis will not be identified to the end of the encounter. It is important to report specific poison in chapter C, line of a definitive diagnosis, after sufficient clinical information is not present to confirm a particular specific substance to cause a vision-related code. The experienced coder will assign a poisoning diagnosis in two circumstances. First, but not only visually coded, substance-related codes should be reported when they are the cause of vision-related deficits when it is known about the patient's condition, or the type of their poisoning associated.

The inclusion of the 3-digit category indicates that an additional digit is needed for the seventh. Current framework 2017.
